

Creating Communities Online

Vision Social Kit

eZ Partner Conference
Geneva 2010

Tony Wood

The image features a vibrant background of a sunset or sunrise with rays of light in shades of orange and yellow. In the foreground, the silhouettes of a male superhero with a cape and a female superhero with long hair stand on a dark, rocky outcrop. They are both looking towards the right. The overall mood is heroic and inspiring.

Community = People + Caring

Thinking

We have a certain view of society and community

We want people to feel part of a community when they live online

We want to give developers the tools that enable that

We want the tools to be generic enough so if you feel our thinking is rubbish you can still benefit from the tools. And hopefully tell us why.

We hope you will partner with us to progress the thinking and the kit

So we created **Vision Social Kit**

Why Opensource **Vision Social Kit** GPLv2

VISION  **n**
with technology

Extending features based on a single concept

- Community Connections
- Twitter
- Blogs
- Forums
- Comments
- Ratings
- Polls

More features coming soon...

We are new to GPL and maintaining a product

We love 'Git'

Git Quick Start

Cloning and Creating a Patch

```
$ git clone git://github.com/git/hello-world.git
$ cd hello-world
$ (edit files)
$ git add (files)
$ git commit -m 'Explain what I changed'
$ git format-patch origin/master
```

Creating and Committing

```
$ cd (project-directory)
$ git init
$ (add some files)
$ git add .
$ git commit -m 'Initial commit'
```

Roadmap

1st March 2010 open Git codebase with GPL v2

More soon....

such as: community tools, issue tracker, more features, some usage example videos, certified extension.

We are looking for help once we release the code. Get involved!

eZ Projects : for latest information
share.ez.no : for eZ community

Codebase : for issues
